— innovators in agriculture —

With Lely Compedes rubber flooring, you prevent injuries and claw diseases

In modern farming, cow comfort is a keyword. Goal is to create a more natural environment for the cows. Concrete flooring does not fit in that anymore. Still today, even with renovations, 95% of the flooring is again made of concrete, which tend to lead to problems with hoofs and legs. However, it is no longer necessary because today we have the Lely Compedes rubber flooring system. The comfort this floor provides gives the cow back her freedom of movement without stress, and allows her to perform natural behaviour. Have you ever seen a cow on concrete standing on three legs licking her skin. She is simply too afraid to slide and fall. On Compedes rubber flooring this type of natural behaviour is back.

Every farmer knows the disadvantages of concrete. Because of lack of a good surface, cows walk on a floor type for which they are not fit. The introduction of Lely Compedes rubber flooring is therefore very important news, as it provides a significant improvement of cow comfort with all its advantages. Research has shown that the step

length on Compedes rubber flooring is as much as in natural environment. Cows walk more firm and secure, thus allowing much better locomotion. Compare it with yourself walking on ice, or walking on carpet. The Lely Compedes flooring fits very well in new buildings as well as in renovation situations.

Benefits for the farmer and the dairy cow

- Animal welfare friendly
- More calmness in the herd because animals can walk secure
- More natural behaviour i.e. showing heat a lot better
- Slipping and sliding is no longer a problem
- Less stress on the claws and joints, thus better legs
- Less curative treatments like hoof trimming
- Better healing in case of (old) hoof problems
- Better locomotion
- Better feeding due to better locomotion
- Improved water intake due to better locomotion

With Lely Compedes rubber flooring you choose for a well tested long lasting product which has already been used on farms for 7 years. The rubber flooring originates from Canada and is being used with great success.

Facts

- The rubber floor exists of loose mats that are connected to each other by a patented puzzle piece connection, that holds a lot better than traditional interlocking systems
- It has a very well optimised shock absorption, due to the exact combination of thickness and density
- It is not too thin, less than 18 mm makes no sense
- It is not too thick to avoid the tiring "walking in sand" syndrome
- It is made out of recycled rubber, which is also good for the image
- It is made in mats, that do not tend to roll up again like rubber produced in rolls. Straight forms means better cleaning results
- Easy to install due to the mat sizes
- Profiles for slatted floors can be made in many forms and shapes

Ideal for renovation

The Lely Compedes rubber flooring fits very well in renovation projects. In many cases it can simply be put on top of the old floor, leaving the investment at a reasonable level.

Manure handling

Lely Compedes rubber flooring can best be used in combination with a simple scraper system. The scraper should be fitted with a urethane blade to have the best cleaning results. Systems with a dump at the end of the alley, or systems whereby the dumps are made every other 10 m, or a complete slatted profile are a few of the many possible solutions.

The patented interlock system provides a smooth floor.

Slatted floor profile is made to specification.

Special anchors fit the floor firmly to the underground.

Live Life Lely

Since its establishment, Lely has always been committed to improving the quality of life of agricultural entrepreneurs as well as the future of the sector. In addition, the company is innovative in its products as well as its concepts for marketing and distribution.

- Lely is committed to helping farmers ahead of market developments
- Lely always supplies the most innovative products to farmers and contractors
- Lely provides customers with optimum customer service
- Everything Lely invents will always serve to make life easier for the benefit of both man and animal as well as providing joy to all our employees

In short: we at Lely do our work in order to serve farmers and to make their lives as enjoyable as possible. From grassland machinery to the automatic milking system, Lely thinks with the farmer and has offered him innovative solutions for the past 60 years.
